

# Virtual Private Network (VPN)

Protect your business and privacy wherever you are

## Changing Nature of Work

The nature of work has changed dramatically. We conduct more personal and professional business using our own computers, laptops and phones from home, in public places, and other remote locations – away from the traditional office.

While it may be possible to secure your traditional office networks, it is impossible for any business to ensure that all staff are on a secure network for all the devices used wherever they may be.

## Filling the Security Gap

With our high-speed Virtual Private Network (VPN) solution, you have the capability of anonymous, encrypted browsing over any internet connection. The VPN solution helps protect you from hackers on public networks and provides confidence that you and your staff are protected while conducting business – wherever work is done.

Everleap offers VPN solutions through our partner, SiteLock.

# Key Product Features and Benefits

- **Browse Privately with No Activity Logs**

The VPN solution will not store or track your browsing history or any data that is transmitted.

- **Secure**

VPN connections are encrypted and secure even on public Wi-Fi networks

- **High-Speed Network**

With 1400+ servers in 75+ locations in 40+ countries, you can always access a high-speed server wherever you are and wherever you want.

- **Unlimited Usage**

You can connect to any of the high-speed servers available – without any data restrictions or data caps.

- **Multi-Device Protection**

With one VPN subscription, you can protect up to 5 devices without paying for additional licenses. Easily protect your desktop computer, laptop, phone, and tablet with one subscription.

- **IP Privacy**

You are assigned a new IP address every time you activate the VPN service and connect to a server.

- **DNS Leak Protection**

DNS Leak Protection secures your initial website connection, preventing leakage of any data.

- **No Borders**

You can access content anywhere in the world.

**ABOUT EVERLEAP** Everleap provides managed cloud solutions to empower small and medium sized businesses (SMB) to succeed in their cloud enablement journey. Everleap offers shared and custom cloud hosting solutions for websites, web applications, databases, and intranets. Everleap is also the single source for comprehensive cloud solutions for SMB cybersecurity.
